

Cornice Nr. 144 “Rope Cove”

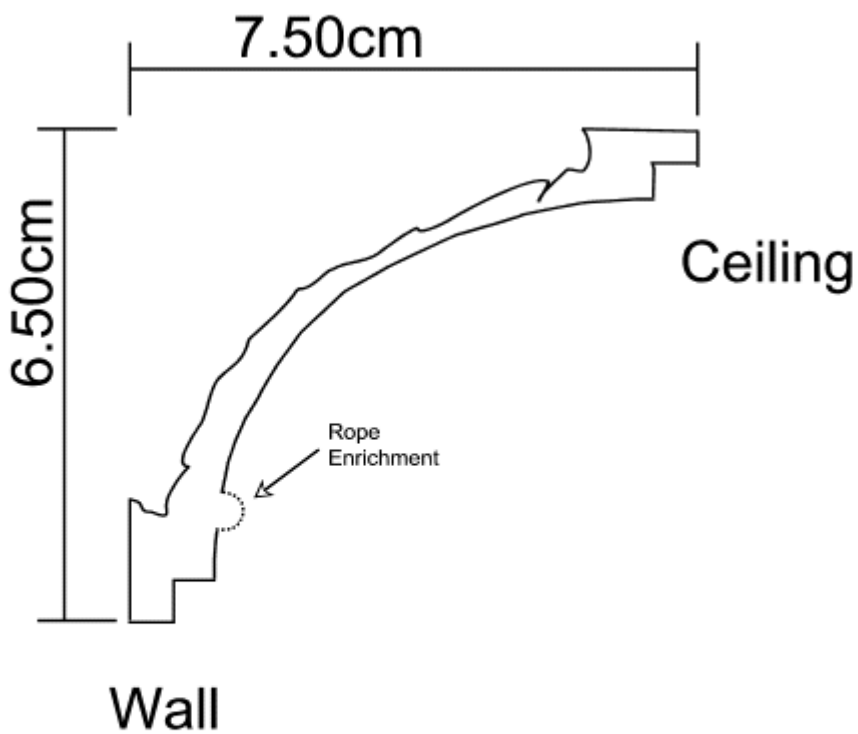

A relatively small cove cornice design. This has a rope design enrichment toward the base / wall line of this cornice pattern.

This is certainly one of our easiest models to install - particularly if you are fairly unskilled at this type of work. If this is what you are considering, please do first look at;- www.ossettmouldings.com/diy.html

Situations to consider for this cornice moulding are certainly areas with low ceilings and possibly those with complex ceiling plans - because this cornice design is so small and fairly easy to install for the amateur.

Approximate cross section drawing appears on page two of this actual document.

Projection 75mm. (c.3”)
Depth 65mm. (c.2.5”)
Length of Cast 3050mm. (10’0”)
Rope Enriched Profile

Nr. 144 "Rope Cove"

Again, when produced at A4 paper size this sketch should produce at full size.

As noted on most other similar free hand sketch is only that - free hand and approximate - don't rely on it!
